### **Contemporary Group (CG) :**

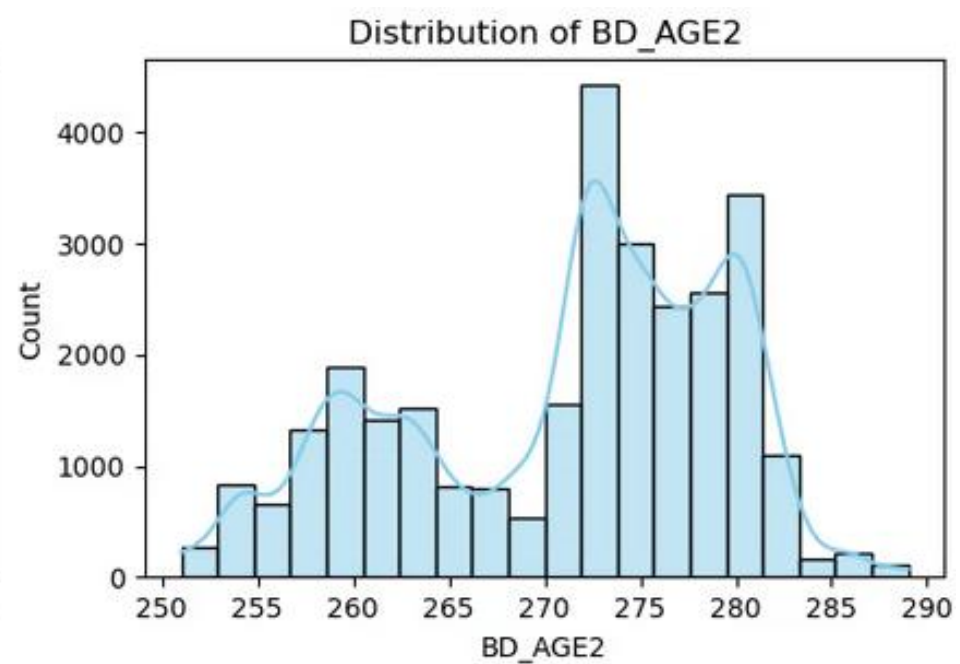

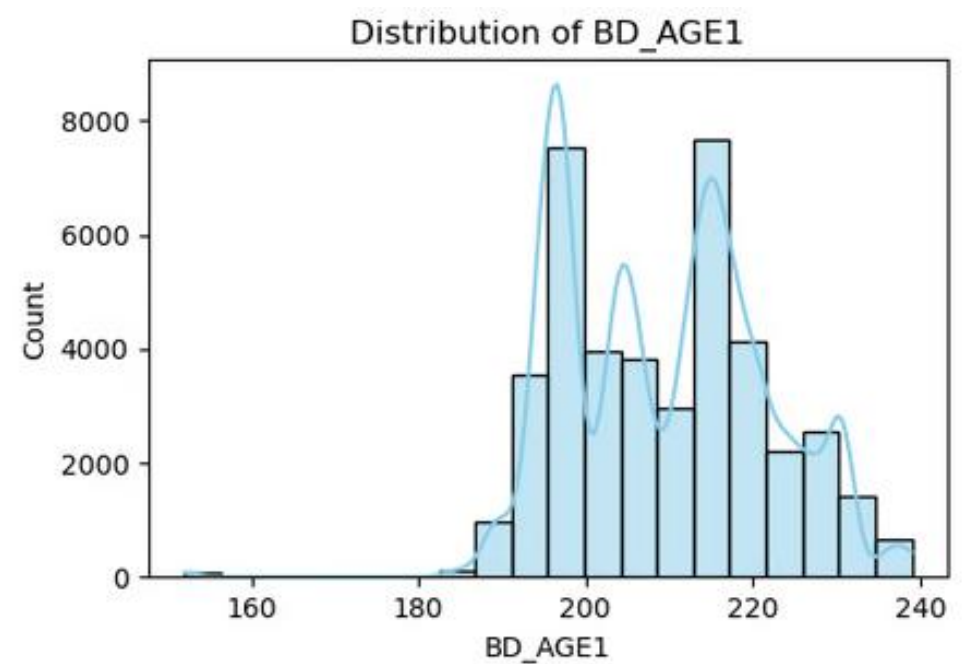

- Là nhóm cá thể cùng điều kiện môi trường nuôi (ví dụ: cùng ao nuôi, cùng trang trại, ....).
- Mục đích: Loại bỏ biến thiên không di truyền, tăng độ chính xác của EBV.

### **FAM\_ID: Permanent Environment (PE)**

- Phản ánh ảnh hưởng môi trường vĩnh viễn lên cá thể (ví dụ: cùng bố mẹ).
- Tách biệt với di truyền, giảm sai lệch trong ước lượng EBV.

$$\mathbf{AGE} = \mathbf{FERT} - \mathbf{MEASURE\ DAY}$$

# Overview of the input data

# Mean Age by Cycle with Standard Error

# Weight distribution by age and sex

Linear Model:  $BD\_Wt1 \sim SEX + AGE$

Linear Model:  $BD\_Wt2 \sim SEX + AGE$

Linear Model: BD\_Wt3 ~ SEX + AGE

Linear Model: PT\_Wt ~ SEX + AGE

# BLUPF90

## blupf90

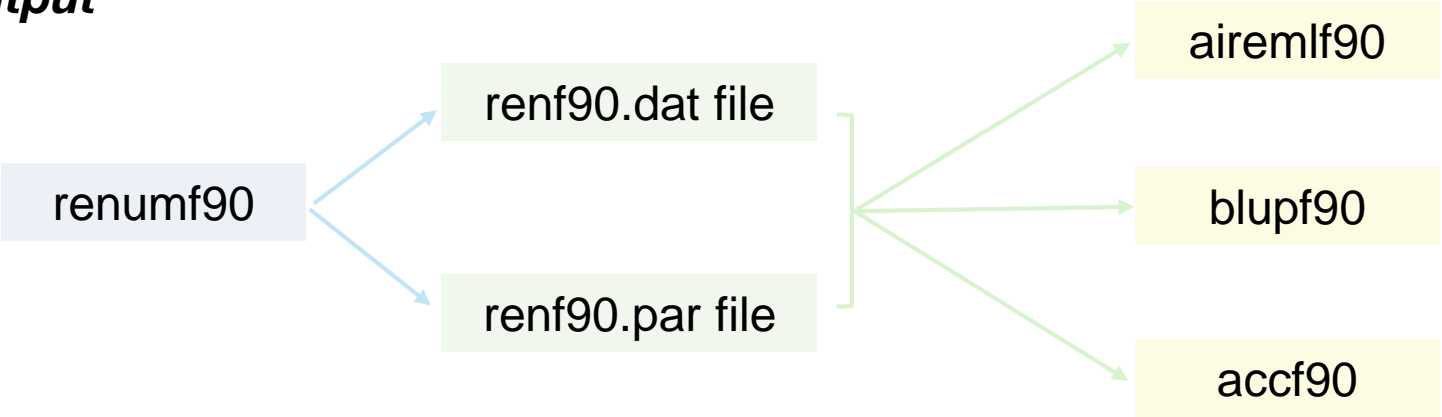

# renumf90

Chuẩn hóa, kết hợp data và pedigree để chạy các tính toán tiếp theo

*renumf90 output*

# aireml

VCE: Variance Component Estimation

Method: Restricted Maximum Likelihood (REML)

$$y = X\beta + Z\alpha + e$$

$y$ : Vector of observations

$X$ : Design matrix of fixed effects including sex, age and CG,

$\beta$ : Vector of fixed effects;

$Z$ : Incidence matrix of **animal effects**,

$\alpha$ : Random **additive genetic effects**

$e$ : Random residual.

# Animal Effect

A random effect in the mixed model representing the additive genetic value (breeding value) of each individual animal.

Using the **A matrix** (*pedigree*

ped

Changes in body weight over cycles

Changes in body weight over cycles

Mean PT\_AGE by Cycle

# accf90: Accuracy of Estimated Breeding Values (EBV)

The correlation between true breeding value (TBV) and estimated breeding value (EBV).

$$Accuracy = \sqrt{1 - \frac{PEV}{\sigma_{\alpha}^2}}$$

PEV: prediction error variance = square(s.e.)

$\sigma_{\alpha}^2$  additive genetic variance

Ranges from 0 to 1 (higher is better)

trait/effect		level	solution	acc
1	5	16774	1.04996848	0.6465

1	5	16781	0.67373127	0.6358

# Conclusion

The chosen model: **Two traits** for BD\_Wt1 and PT\_Wt

## Heritability ( $h^2$ ):

- BD\_Wt1: 0.33
- PT\_Wt: 0.15

No significant differences observed **compared to another models**

## Reasons for selection:

- **High genetic correlations** between traits – *correlation  $\approx 1$*
- **Cost-effective**: earlier selection reduces **feeding and maintenance costs**

The image features four decorative geometric shapes in the corners: a light blue triangle in the top-left, a light blue triangle in the top-right, and two overlapping triangles (one light blue, one medium blue) in the bottom-left and bottom-right. The text is centered in the middle of the slide.

Thank you

**-2logL:** Negative twice the restricted likelihood  
Smaller is better: Indicates better model fit

**AIC** =  $-2\log L + 2p$  ( $p$  is the number of unique variance components)

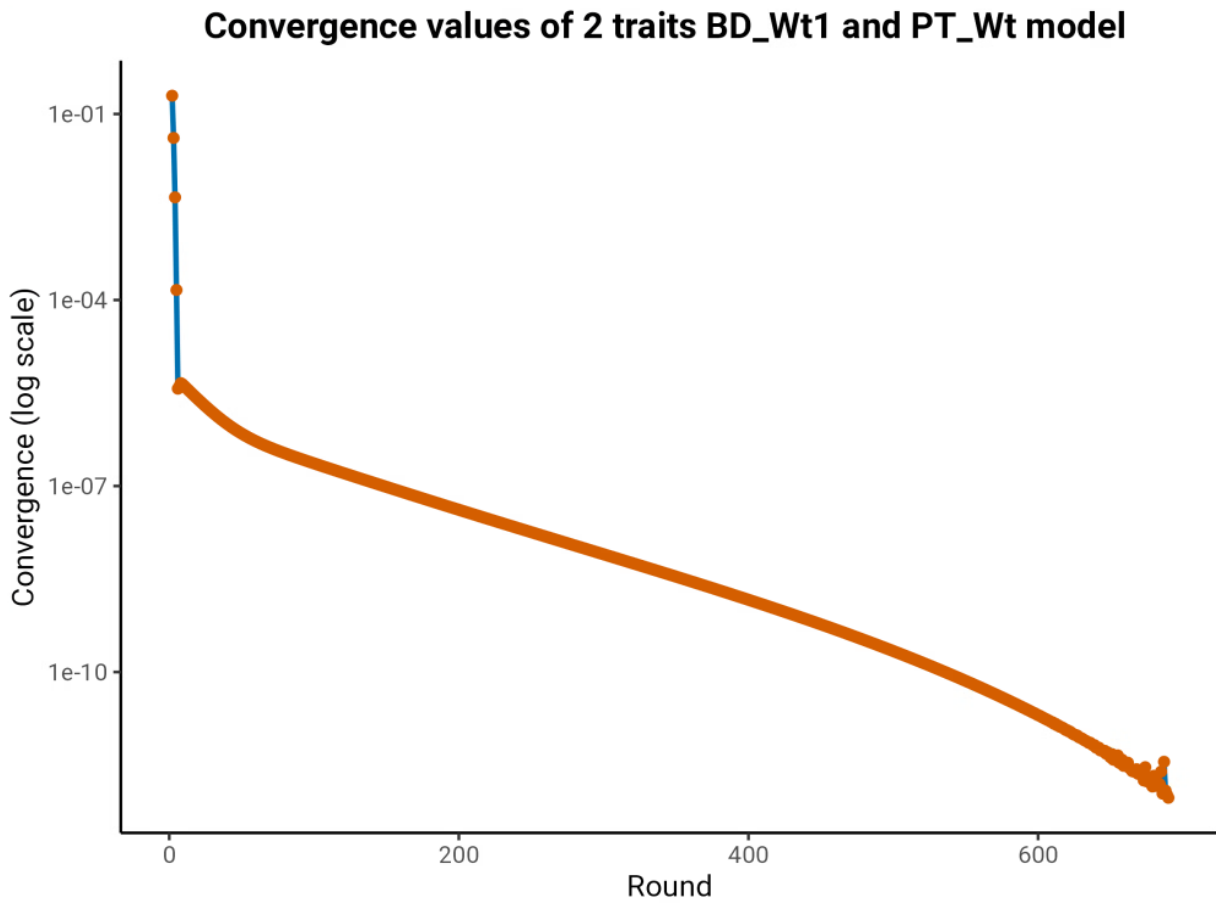

**Convergence:** Indicates algorithm stability  
Smaller is better

**new R:** Updated residual variance (Reflects environmental variation)

**new G:** Updated genetic variance (Represents additive genetic variation)

**Correlations:** Measures the degree of genetic dependency between traits  
High values (close to 1 or -1) indicate a strong shared genetic influence between traits
